

RCS submission form (carrier verification)

Brand: 9FIVE (9FIVE Eyewear) · Agent ID: ifive_fja6tdyg_agent · Agent name: 9FIVE · Telnyx org: 7a0503f9-ead1-4d35-9795-c6359798e722 · Website: 9five.com · Support: rx@9five.com

Agent Summary	
Please provide a brief summary of your brand and use case 1-2 sentences describing your brand. A brief description of RCS content that will be sent and how the agent will be used. Description of where the call-to-action will be located and how participants will opt-in.	9FIVE (9FIVE Eyewear) is a San Diego eyewear brand selling sunglasses, optical and prescription frames, and readers direct to consumers at 9five.com. The 9FIVE agent is a conversational commerce and customer-care assistant, operated for 9FIVE by its commerce platform Redo Tech, Inc. It answers order-status, shipping, fit, lens and return questions, and re-engages shoppers who left items in their cart. RCS content is primarily rich text with tappable reply suggestions. Product and order replies may include a standalone rich card or a 2-10 card carousel with product imagery and an open-URL action back to the relevant page on 9five.com. No content is age-gated, affiliate-marketed or lending-related. Consumers opt in by submitting their mobile number in the signup form on 9FIVE's own website, 9five.com, or by messaging the brand first. The call-to-action and the full CTIA disclosure appear together, directly above the submit button, and are visible before the shopper submits.

Agent interactions

What actions trigger messages to users?

When is the first message sent from the agent to the user? Are messages sent at a consistent date/time, do user actions (such as a purchase) trigger messages, or do external triggers (such as package delivery) trigger messages?

Every message is triggered by the recipient's own action or by a commerce event on their own account. There is no scheduled send, no fixed date/time cadence and no bulk broadcast on this agent.

First message — two paths

- Consumer-initiated. The shopper messages 9FIVE first; the agent replies within seconds.
- Event-initiated, post-opt-in. After the shopper opts in and confirms with YES, an abandonment or order event triggers a single outreach message.

Event triggers in use

- User actions: cart abandoned, checkout abandoned, browse abandoned, opt-in confirmed, return submitted, exchange processed with store credit, back-in-stock request fulfilled.
- External / fulfillment triggers: order created and order-status changes from the merchant's store and carrier (shipped, out for delivery, delivered, exception).
- Inbound received: any consumer reply wakes the agent for a conversational response.

Timing and frequency

Abandonment outreach fires roughly 30 minutes after the triggering event, at most one initial message per abandonment, subject to a merchant-configured cooldown between initial messages and suppressed entirely if the shopper has since purchased. Order-status messages are one per status change. Conversational replies are on demand only, in response to the consumer. Typical volume is a handful of messages per shopper per month; message frequency varies.

What types of interactions will the agent have with users? What are the agent's primary (those that occur most commonly) and secondary (those that are possible but less common) interactions?	Primary • Order status and tracking — "where is my order", carrier status, delivery-date questions. • Cart-abandonment re-engagement — a personalised nudge about the specific frames left behind and, if the shopper asks for one, a single-use discount code. • Product questions — frame fit and measurements, lens options (polarized, gradient, prescription), materials, care and availability, answered from 9FIVE's own product catalogue and help content. Secondary • Returns and exchanges — eligibility check, starting a return, resending a prepaid return label, recommending an exchange, checking return status. • Order edits — correcting a shipping address, cancelling an unfulfilled order. • Back-in-stock notification signup for a specific frame or colourway. • Escalation to a human — the agent detects frustration or an out-of-scope request (for example a prescription question it cannot answer) and hands the conversation to a 9FIVE support agent in the same thread. • Compliance keyword handling — STOP, HELP and START, detailed below.
Will the agent support conversational flow? Will the agent respond to P2A messages from users?	Yes [x] No [] The agent is fully conversational. Consumer replies are answered by an AI assistant scoped to 9FIVE's catalogue, order data and help content, in the same thread, typically within seconds. • Tappable suggestions. Replies may carry up to 4 suggestion chips per card and 11 per message. Tapping a chip returns its label as the consumer's next message, so a tap and a typed reply are handled identically. • Human handoff. The agent recognises when it should stop and routes the thread to a human 9FIVE support agent, who replies from the same agent identity. • Capability-aware transport. Every send checks RCS reachability for that number first. If RCS is unavailable the message is delivered as SMS from 9FIVE's own A2P long code instead, so the conversation continues either way. Provider-side automatic fallback is deliberately not used.

**Please provide sample content
for each interaction listed above.**

If Rich Content is being used, please attach
screenshots below.

Opt-in confirmation — rich text

9FIVE: You're subscribed to order updates and cart reminders
from 9FIVE. Msg frequency varies. Msg & data rates may apply.
Reply HELP for help, STOP to cancel.

Cart abandonment — rich text + suggestions

Hi Sarah, this is Jessica from 9FIVE. I noticed you left the
Tips LX in Black Polarized in your cart. Anything I can help
with before you check out?

Reply HELP for help, STOP to cancel.
[Tell me about fit] [Back to my cart → 9five.com/cart]

Product recommendation — rich card carousel, 3 cards

Happy to help! Frame measurements are listed on every product
page. Here are a few similar frames in stock now:

Card 1	title: Diego Shadow Shell	\$155
	media: product image	
	suggestions: [View → 9five.com]	[Diego Shadow Shell]
Card 2	title: Caps Shadow Shell	\$155
Card 3	title: Diego Smoke	\$155

Product follow-up — rich text + suggestions

Great pick. The Diego Shadow Shell is handmade acetate with
stainless steel hinges and comes polarized. Want me to add it
to your cart?
[Yes, add it] [No thanks]

Order status — rich text + suggestions

Your 9FIVE order #1024 shipped via UPS and is out for delivery
today.

Reply HELP for help, STOP to cancel.
[Track my order → 9five.com]

Return / exchange — rich text + suggestions

I can start a return for the Tips LX from order #1024. Want me
to email you a prepaid label, or would you rather exchange for
a different lens?
[Email me a label] [Exchange] [Talk to a person]

Human handoff — rich text

I'm looping in a teammate from 9FIVE — they'll pick this up
right here shortly.

Consent Management	
Where does opt-in take place? Opt-in is critical for approving the agent launch. Provide details for how opt-in is acquired. If opt-in is through a website or an app, kindly provide links here as well as attaching screenshots below.	All opt-in happens on 9FIVE's own website. There is no purchased, rented or third-party-sourced list, and consent is never a condition of purchase. - On-site signup form — the signup popup on 9five.com collects the shopper's email, then their mobile number. The phone step shows the full disclosure directly above the "GET MY CODE" submit button, visible before submission. Opt-in is then confirmed by replying YES (double opt-in). - Consumer-initiated inbound — the shopper messages 9FIVE first; the reply is the response to their own request. Links Website: https://9five.com Opt-in screenshot: https://redoapp.github.io/rcs-registration-assets/9five/9five-opt-in.png Privacy policy: https://9five.com/policies/privacy-policy Terms of service: https://9five.com/policies/terms-of-service Support: rx@9five.com
Call-to-Action (CTA) language Please provide the language that will prompt users to opt-in. US CTIA Requirements: Program description. Msg&data rates may apply. Message frequency. Privacy statement or link to privacy policy. Link to full mobile T&Cs page.	Signup form, phone step — verbatim By providing your phone number, you agree to receive recurring automated marketing text messages (e.g. cart reminders) from 9FIVE Eyewear. Consent is not a condition to obtain goods or services. Msg & data rates may apply. Msg frequency varies. Email rx@9five.com for support, or reply HELP for help and STOP to cancel. View Terms of Service and Privacy Policy. "Terms of Service" and "Privacy Policy" are links to the pages above. The screenshot is attached on the last page. CTIA element coverage - Program description — "recurring automated marketing text messages (e.g. cart reminders) from 9FIVE Eyewear" - Msg & data rates — "Msg & data rates may apply" - Message frequency — "Msg frequency varies" - Customer care — "Email rx@9five.com for support, or reply HELP for help" - Opt-out — "STOP to cancel" - Privacy — linked to 9five.com/policies/privacy-policy - Full mobile T&Cs — linked to 9five.com/policies/terms-of-service - Not a condition of purchase — stated explicitly

What message does the agent send when a user signs-up? In the US, it is a requirement to send a message confirming opt-in.	Double opt-in. After the phone number is submitted, the agent asks for confirmation: 9FIVE: Reply YES to receive order updates and cart reminders from 9FIVE. When the user replies YES, the agent confirms the opt-in: 9FIVE: You're subscribed to order updates and cart reminders from 9FIVE. Msg frequency varies. Msg & data rates may apply. Reply HELP for help, STOP to cancel. Both are the exact strings shown in the agent preview video.
Ongoing opt-out disclosure on outbound messages	Every outbound outreach message from this agent carries the opt-out and help disclosure as a fixed, system-appended tail. It is not composed per message and does not vary: Reply HELP for help, STOP to cancel. Consumer replies within an open conversation are exempt, as the consumer initiated them.
What are the opt-out keywords for the agent? Note in the US the following keywords must be supported: STOP, QUIT, CANCEL, END, STOPALL, UNSUBSCRIBE	STOP · STOPALL · STOP ALL · UNSUBSCRIBE · CANCEL · END · QUIT Matched case-insensitively on the whole trimmed message, so "stop" and "Stop" both opt out. All six US-required keywords are supported. Opt-out is honoured for the phone number across every 9FIVE message channel, RCS and SMS alike, and immediately halts outreach and closes any open conversation.
What message does the agent send when a user opts out?	You're unsubscribed from 9FIVE and will receive no further messages from this agent. Reply START to resubscribe. This is the exact string shown in response to STOP in the agent preview video.
What are the Help or Support keywords for the agent? Note in the US the HELP keyword must be supported.	HELP Matched case-insensitively on the whole trimmed message. Any other request for help is handled conversationally by the agent, and escalated to a human 9FIVE support agent when appropriate.
What message does the agent send when a user sends HELP?	You are subscribed to 9FIVE for customer support and cart reminders. Reply STOP to opt out. Reply HELP for help. Standard message and data rates may apply. Message frequency may vary. View our Terms and Conditions at 9five.com/policies/terms-of-service. View our Privacy Policy at 9five.com/policies/privacy-policy. Support: rx@9five.com This is the exact string sent in response to HELP in the agent preview video.

What keywords can the user send to revoke the opt-out and start receiving messages again?	START · UNSTOP YES and Y are additionally accepted as confirmation responses inside the double-opt-in flow.
What message does the agent send when a user revokes opt-out?	START runs the same double opt-in as a new signup. The agent first sends: 9FIVE: Reply YES to receive order updates and cart reminders from 9FIVE. and on YES confirms with: 9FIVE: You're subscribed to order updates and cart reminders from 9FIVE. Msg frequency varies. Msg & data rates may apply. Reply HELP for help, STOP to cancel.

Agent preview	
Agent access instructions To test the agent, please specify a wakeup/trigger phrase (e.g. "START" or "Hi"). When received, the agent will start the conversation with the user. Provide a method for reviewers to trigger the agent, such as a website where reviewers can invite and add phone numbers.	Trigger phrase Send HI to the agent. The agent greets the reviewer, states who it is and offers suggestion chips for the primary interactions. START also wakes it. HELP and STOP can be exercised at any point in the thread. Adding reviewer numbers Reviewers do not need a website. Send us the phone numbers to test and we will register them as test devices on agent ifive_fja6tdyg_agent via the Telnix test-number invite; the device then accepts the invite prompt in Google Messages. Please supply Verizon numbers where possible — T-Mobile and AT&T reject tester invites at the carrier, which is a carrier restriction rather than an agent configuration problem. Suggested review script • Send HI → greeting plus suggestion chips. • Ask "where's my order?" → order-status reply with a tracking action. • Ask "do you have polarized lenses?" → product answer, possibly a rich card. • Send HELP → the HELP message quoted above. • Send STOP → opt-out confirmation; no further messages. • Send START → double opt-in prompt; reply YES → opt-in confirmation.

Video URLs If you prefer to review your agent via video, provide comma-separated URLs for a video showing your agent's core functionality and opt-out capabilities. URLs must be publicly accessible.	https://redoapp.github.io/rcs-registration-assets/9five/9five-rcs-preview-v2.mp4 A walkthrough of the agent's Google Messages thread showing its core functionality and consent handling in a single continuous conversation, using 9FIVE's live product catalogue and the exact production copy quoted in this form. What the video shows, in order • Cart reminder, carrying the standing disclosure "Reply HELP for help, STOP to cancel.", with suggestion chips. • Chip tap ("Tell me about fit") answered with a 3-card product carousel. • Card chip tap ("Diego Shadow Shell") answered with a follow-up and suggestion chips. • Order-shipped update, again carrying the disclosure, with a tracking action. • START → double opt-in prompt → YES → opt-in confirmation, matching the strings above verbatim. • HELP — answered with the support response quoted above verbatim. • STOP — answered with the opt-out confirmation quoted above verbatim.
Screenshots Paste below	Rich-content interactions are demonstrated in the agent preview video above: suggestion chips and the product carousel in use, including chip taps. The opt-in surface is attached on the next page.

Attachment — opt-in surface on 9five.com

Signup popup on 9five.com (mobile), phone step, as shown to shoppers before they submit. The full disclosure sits directly above the "GET MY CODE" button. Captured 30 Sep 2026. Public copy: <https://redoapp.github.io/rcs-registration-assets/9five/9five-opt-in.png>

A mobile signup popup for 9five.com. The background is dark with a pair of sunglasses floating on water. The text "9 FIVE" is at the top in large white letters. Below it, "15% OFF" is written in large white letters, followed by "+ SMS-only Opportunities" in smaller white text. A white input field contains "US" with a dropdown arrow and "+1 (555) 000-0000". Below the input field is a small line of legal text. At the bottom is a gold button with the text "GET MY CODE".
